

**DESCRIPTION**

The **GEFCO #PE108 Large Sump Fixture** provides piping termination for both supply water or suction piping. The fitting may be provided with either bottom or side connections for piping. The fixture may also be utilized for either 4" or 6" piping. In addition to a single main piping entry, a 2" pipe connection can also be accommodated for such purposes as filter system suction, filter return, drainage of a particular pool, or as a small equalizing line termination.

Sump Body is constructed of tough ABS plastic with Slip connections for piping or pipe fittings. The body has an integral water stop flange that is embedded in floor when the fixture is cast into place.

A stainless steel anti-vortex plate is then placed over the top of the fixture to prevent vortex and potential cavitation of pump. The plate itself has a recessed area suitable for tile or other finishing materials.

When specifying, please use the following suffix to ensure the proper fitting is provided:

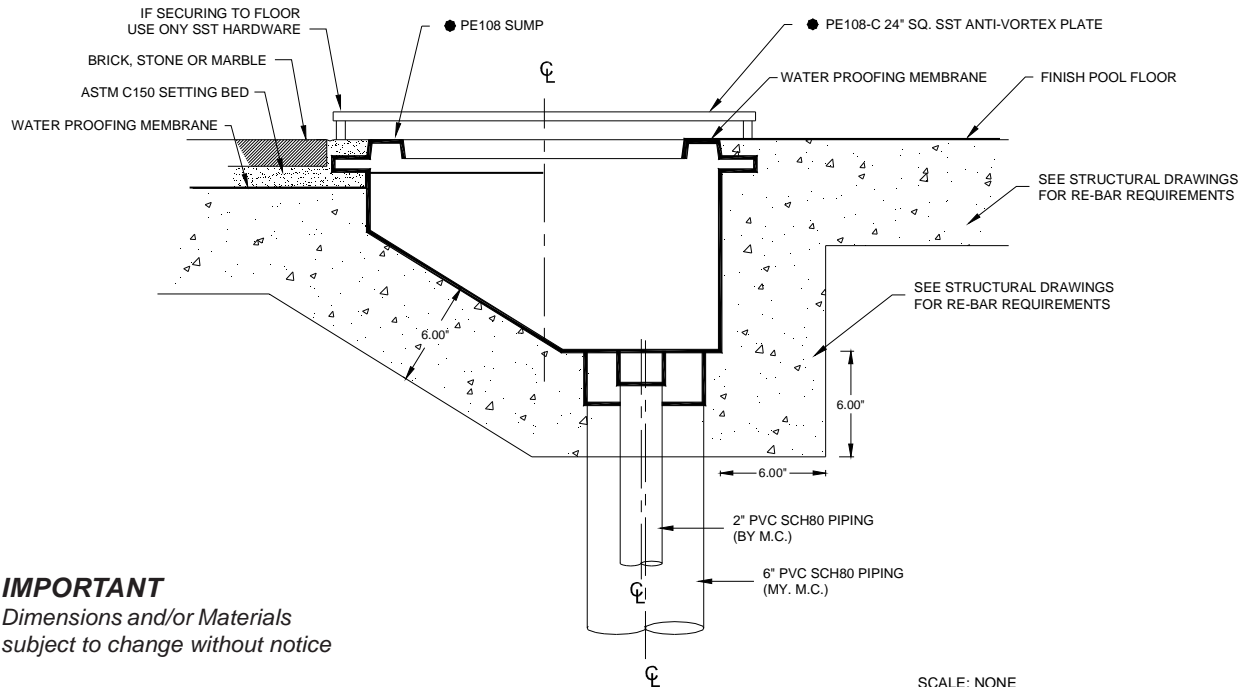

**GEFCO #PE108-XX**

- 4B 4" Bottom Entry
- 6B 6" Bottom Entry
- 42B 4" & 2" Bottom Entries
- 62B 6" & 2" Bottom Entries

**Note:** - Use 4" connection for up to 225 Gallons per Minute.  
 - Use 6" connection for up to 500 Gallons per Minute.  
 - 2" connection can not be changed to a different size.

**TYPICAL SPECIFICATIONS:**

- \* **GEFCO #PE108-XX Sump:**
  - ABS plastic body with water stop flange.
  - 24" x 24" stainless steel anti-vortex plate with 3/8" tile setting rim.
  - Specify Sizes of PVC entry connections
